

```
class Student {  
    // data member (also instance variable)  
    int id;  
    // data member (also instance variable)  
    String name;  
    public static void main(String args[])  
    {  
        // creating an object of  
        // Student  
        Student s1 = new Student();  
        System.out.println(s1.id);  
        System.out.println(s1.name);  
    }  
}
```
