

Practical no.3: Program on class and object

// Java Program for class example

class Student { *// data member (also instance variable)*

int id; *// data member (also instance variable)*

String name;

public static void main(String args[])

{

// creating an object of

// Student

Student s1 = **new** Student();

System.out.println(s1.id);

System.out.println(s1.name);

}

}
